Dell lap Screen displaying Thin RedLine&green line
Posted by delladmin - 29 Dec 2016 11:16

_____

1. screen is faulty and needs replacing - do the lines show up all the time, even while booting? If you already replaced this, and youre still having the issue, it must be 2 or 3. I cant believe that replacing the LCD didnt fix it!

2. Graphics card (well the laptop version of one) is faulty

3. Software or driver problem, which is the only one that's fixable.

Try tapping F8 while booting to bring up the menu then booting into safe mode. If the green lines still appear it's probably a hardware fault.
