

Dell laptop makes weird screen and sounds

Posted by delladmin - 30 Dec 2016 06:12

Regarding the memory, try putting the 4gb ram to your 2nd slot to see if it's still good. The same goes for the 2gb memory, try putting it in slot 1 and see if it gets read by the system.

As for getting a weird screen and sound, have you tried scanning for virus or malware and/or update the drivers of your laptop?
