

Dell Inspiron N5110 white screen

Posted by admin - 30 Jun 2012 17:57

I accidentally bumped my laptop against the back of my loveseat and now my screen has gone completely white. But if I half-way close the screen or jiggle it it comes back for a few moments but goes back white again

Is there anything I can do myself to fix this problem? I don't have the money right now to get a replacement screen or another laptop and I'm just really relying on a prayer that this can be fixed.
