Dell XPS 13 TrackPad Issues after Driver Update
Posted by admin - 30 Jun 2012 18:03

_____

After updating my XPS 13 Ultrabook's Cypress drivers to the newest drivers released yesterday on the Dell Support Downloads page, all gestures (Though still enabled) have stopped working. The trackpad itself still seems to work fine after the driver update, but no gestures work any longer. They all worked right before the update.

I've tried the normal set of enable/disable, reboot, update. But has anyone else had this problem or know how to resolve?

Thanks
