

Computer freezes with Windows Experience Index

Posted by admin - 30 Jun 2012 18:13

So i had to re-install windows and all and the rating is 1.0 and when i click to refresh it, it just freezes half way through the process and i cant do anything but force a restart/shutdown.

I have the m17x i believe with ati radeon 5870 xfire or something and windows 7 64 bits, any ideas?
thanx
